Rip alarm

Monitor check in and out

Discreet ID badge

# Reliance Protect ID Badge

## Discreet. Simple. Advanced.

Supporting your lone workers in the field.

Styled as a traditional ID card holder, the Reliance Protect ID Badge is a discreet yet highly capable personal safety device. With easy to access buttons and LCD screen on the back of the device, it allows users to raise alarms safely when faced with aggression from other people. Leading GPS technologies, advanced impact and fall detection, and integration into our Monitor proactive safety services further enhance it's position as a leading personal safety device.

2 way alarm call and login call facility

**GPS**

SiRF V + Assisted Global Navigation Satellite System (A-GNSS)

**GS** Quad-band 850/900/1800/1900 MHz

**Accessories**

Protective silicon case, in car charger

in these situations the Monitoring Centre staff will only initiate two-way communication through the ID badge upon request from the user.

Should the user be incapacitated, ID Badge will detect any fall or extended period without movement, automatically raising a Red Alert with the Monitoring Centre. In these situations, the Monitoring Centre staff may initiate two-way communication quickly to determine the user's situation.

In all Red Alert situations, the Monitoring Centre staff will escalate as the situation demands – all the way up to the highest Level 1 Police responses (where situations warrant such a response) through our BS8484 accreditation.

## Discreet but Powerful

Reliance Protect ID Badge appears to be a simple ID card holder. Don't be taken in, though. ID Badge is a powerful, lone worker safety device.

Worn like a traditional ID card, either with a lapel clip or on a lanyard, ID Badge features two-way audio communications, and Red and Amber Alert buttons. It is the first lone worker device to feature GNSS (Global Navigation Satellite System) geolocation capability. GNSS speeds up the time for the ID Badge to get a location position plus also improves the accuracy of that location position.

ID Badge has three buttons on the front of the device that are integrated into our Monitor proactive welfare check services. Via these buttons, users can check in and check out through the working day. If the user does not check out in the preallocated time, the Monitoring Centre staff will contact the user to check they are safe.

## Risk Assessment

Before entering a risky environment, the user can employ the Amber Alert button to inform the Reliance Protect Monitoring centre about where they are working, their planned activities and any specific risks they may be exposed to.

This provides the Monitoring Centre with the information necessary to make good decisions swiftly, should an incident occur.

## Red Alert

If the user feels threatened at any point, or suffers an injury and requires assistance, they can use the Red Alert button, easily accessible yet discreetly located in the centre of the rear face of the device.

ID Badge will immediately open a one-way audio channel with the Monitoring Centre, also sending its latest high-precision geolocation information. The Monitoring Centre's highly experienced staff will listen to the audio feed to assess the situation. The user can speak to them if they choose and can request two-way audio. To avoid compromising the safety of the user,

## A lone worker is never alone

Reliance Protect is the UK market leader in lone worker protection. Over 40,000 users throughout the UK enjoy our all-inclusive, managed protection service, with fixed monthly fee pricing facilitating easy, effective budget management.
