

# Body-Worn Video Management System

Reliance Protect leading the market with live streaming body-worn video solutions

VideoManager is a powerful web-based software tool for managing video footage, system users, and your inventory of body-worn cameras.

This web-based back-office gives you complete control over your entire complement of body-worn cameras and cloud storage media, making the creation and sharing of evidence-ready footage fast, simple and secure.

## Key Features:

- ✓ Web-based, requiring no software downloads or installations
- ✓ Accessible via desktop, laptop, tablet or smartphone
- ✓ Advanced but easy-to-use video editing tools, with minimal training – redact or crop video, blur backgrounds, add text, zoom in, and mute sections of audio
- ✓ Your original video footage master copies are retained in secure storage
- ✓ Access controls allow users to be granted permission levels according to their roles
- ✓ Create storage timescales in line with data policies
- ✓ Full audit trail of video editing and actions taken, for camera-to-courtroom accountability

# Body-Worn Cloud Storage

Reliance Protect leading the market with live streaming body-worn video solutions

Media files are easily uploaded via wifi or ethernet and stored securely in the cloud for access via the secure, web-based VideoManager portal.

## Cloud storage offers a range of key benefits:

### Security and business continuity

The media files are held securely and replicated in remote secure data centres and is therefore protected against scenarios that could result in damage or loss if held and stored locally on site.

### Scalability & Reduced IT Costs

Reliance Protect offers 2 options depending on the volumes and storage requirements of the media created. These options are fully scalable and flexible, negating the need for organisations to invest, monitor and continuously maintain in-house media storage solutions.
